| Title: ENGINEERING SPECIFICATION Universal Lifted Equipment Design for Gulf of Mexico | | Released 6/12/2012 |

ENGINEERING SPECIFICATION

Universal Specification for Design of Lifted Equipment for the Gulf of Mexico

The purpose of this engineering specification is to meet the intent of the design requirements of major oil companies for offshore shipping containers in the Gulf of Mexico.

This specification covers existing equipment and new fabrication. However, it is suggested that new fabrication comply with international specifications, such as DNV 2.7-1, DNV 2.7-3, or similar specification.

UNDER REVISION

The controlled copy of this specification is on file at Foley Engineering, LLC.

Printed and downloaded copies of this specification are uncontrolled.
